

WHY DOES MY KITTEN NEED A WHOLE HEALTH PLAN?

Preventive care is essential to helping your kitten live a long, healthy, and happy life. When most people think of preventive care for their kitten, they think of vaccines.

While vaccinations are very important, there are actually four cornerstones of preventive care which are equally essential. Our Whole Health Plans incorporate all four of these cornerstones:

EXAMS

At Frontier, an exam is not just a complete physical examination and health assessment, but an opportunity for your veterinarian to know and appreciate your kitten as an individual. No two kittens have the exact same lifestyle. Our veterinarians take the time to understand your pet and use this knowledge as the basis for medical recommendations.

LAB TESTS

Diagnostics like blood and urine tests help to determine if all body systems are functioning as they should. They also screen for genetic and breed-specific health issues and check for chronic conditions like kidney and liver problems. Early detection and treatment of chronic disease is critical to helping your kitten live a long, healthy life with your family. Early management of chronic conditions is less costly and risky than emergency treatment once the disease progresses.

PARASITE TESTING

Internal parasites can make your kitten seriously ill, but fortunately they are also easy to prevent. Twice-a-year intestinal screens are recommended by the Companion Animal Parasite Council (CAPC) and our veterinarians. Preventive routine deworming against parasites such as roundworm, which can infect humans and cause serious illness, is important to the health of your entire family.

VACCINATIONS

Vaccinations are an easy way to protect your kitten from life-threatening feline illnesses like distemper, while vaccines like rabies protect your whole family because rabies is fatal to both people and pets in your household.

	Kitten Plan	Cost without Plan
Today's Visit
